

Anything's possible with the right technology

FUJITSU

The Fujitsu Education Ambassador Programme for Scotland

Creating opportunities for everyone.

Every part of our lives is affected by digital. It's changing how we access, create and share information. How we work together and communicate. And how we learn and teach.

Schools, colleges and universities need to keep up. If you don't have the digital systems in place at your establishment, you'll find it hard to give students the skills to thrive in a digital workplace.

That's why the Fujitsu Education Ambassador Programme for Scotland is so valuable. Ultimately, it's about working together to help students in Scotland achieve more and grow their potential even further.

We hope your establishment will help make that difference by joining the Programme.

**Please submit your proposal to us by 20th July 2018.
For more information on how to apply, please see overleaf.**

"Our Education Ambassadors are key to the digital future of Education."

ASH MERCHANT,
DIRECTOR OF EDUCATION, FUJITSU

shaping tomorrow with you

What's the Fujitsu Education Ambassador Programme?

The Education Ambassador Programme is all about enhancing teaching and learning to reveal and unleash students' potential. And it does that by putting technology at the heart of education. Since its launch in 2015, it's been working towards creating 30 Innovation Hubs. These act as centres of excellence in digital co-creation within the education community.

How will it benefit Scotland?

We want a broader spectrum of Scotland's students to be able to use digital technology and see for themselves how much more effective it makes learning and teaching. As a result, the Scottish arm of the Programme will see 10 new Hubs open in Scotland by 2019. Starting later this year, this ambitious project's perfectly aligned to the Scottish Government's own plans for technology in education.

We're not alone

Our vision is to work together, not only with our Ambassadors but also with our industry partners Intel, Ruckus and NetApp, who believe technology can make a difference to education. Our Education Ambassador Programme gives education establishments the opportunity to discover new and exciting technologies. They can explore the ways in which they give young people the power to create, invent and build the future. They can even contribute to the technologies' evolution.

The companies we partner with share common ground with you in one key factor. They're committed to this goal. By working together, we can all deliver the benefits of digital change in Education.

What makes an Ambassador?

Our Ambassadors work with ourselves and our partners. Like us, they have a real passion and ambition for technology, and adopt a 'many learning from many' approach.

Their role: to encourage education establishments to work together, and promote the best practices in teaching and learning for technological change. They strive to make technology an enabler for education. And they look out for fresh ways of enabling innovation.

Working together, we can change the way Scotland learns.

We select our Ambassadors because of their excellence and commitment to our shared vision.

If your establishment would like to become an Ambassador for the Fujitsu Ambassador Programme, we therefore ask that it completes a proposal document.

This shows how interested, suitable and ambitious it is to promote technology in its learning and teaching environment. It also shows how it would integrate an 'Education Ambassador Hub' into its learning environment and benefit the whole community and wider region.

You can download the proposal template [here](#).

Please submit your proposals to education@uk.fujitsu.com before the closing date of the 20th July 2018.
